

Artificial Intelligence Software, HW 3

Preprocessing

ROS2

Center for
Cognitive
Modeling

Task 1

Short description: Solve a 1st subtask from [Deep Learning School](#) HW. The collab code is available in «input_data»/task1.ipynb file.

Artifacts: Filled Jupyter Notebook with code, results.

Task 2

Short description: Configure a Dockerized ROS 2 environment to work with gazebo Ignition environment. and solve tasks from doc, which position in «input_data/task2.pdf» file.

Artifacts: Dockerfile, docker-compose.yml, src/ (your ROS 2 package), and a PDF report with screenshots and usage instructions.

Requirements

- You should use 2 docker containers — 1-st for simulator, 2-nd for other stuff.

Deserve "A" grade!
