

Tasks

Short description: The task is to learn how to run models from different sources.

- Task 1: Run Ultralytics YOLO for *instance segmentation* (inference on ≥ 2 images; save outputs).
- Task 2: Run any Hugging Face Space (any working demo) and provide the link.
- Task 3: Find any model in Kaggle with working inference code; run it and save outputs.
- Task 4: Find a runnable GitHub repository and run it.

What to Submit

Submit a short reproducible report (PDF or Markdown) containing:

- Short description of each task and what you ran.
- Exact commands and environment, if applicable.
- Screenshots showing inference results (masks/overlays) and the running demos.
- Links: Hugging Face Space URL, GitHub repo, Kaggle repo.

Deserve "A" grade!
