

Artificial Intelligence Software, HW 6

Training process

Center for
Cognitive
Modeling

Goal of the Assignment

Short description: Took models from HW 5 and fine-tuned them.

1. Take Task 1 and Task 3 or 4 from HW 5. It should be different problem types (e.g., if Task 1 was instance segmentation, Task 3/4 should be classification or object detection). If no, choose a new one.
2. Find or annotate a suitable datasets for fine-tuning for both tasks. It should contain at least 20 pieces of data for each task. Separate it into train and validation sets.
3. Fine tune the models on new datasets. Use ClearML to track the training process. Try to obtain better results than the original model.
4. Write a report describing the dataset, training process, and results. Include screenshots of ClearML dashboard showing training metrics and final evaluation results. Show the changes compared to the original model.

Deserve "A" grade!
